Lab Task # 01

Database Systems (CS-2204)

Instructor's Name

Engr. Awais Rathore

Submitted By

Name: Tayyab Hanif Awan

Roll No: 2024-SE-11

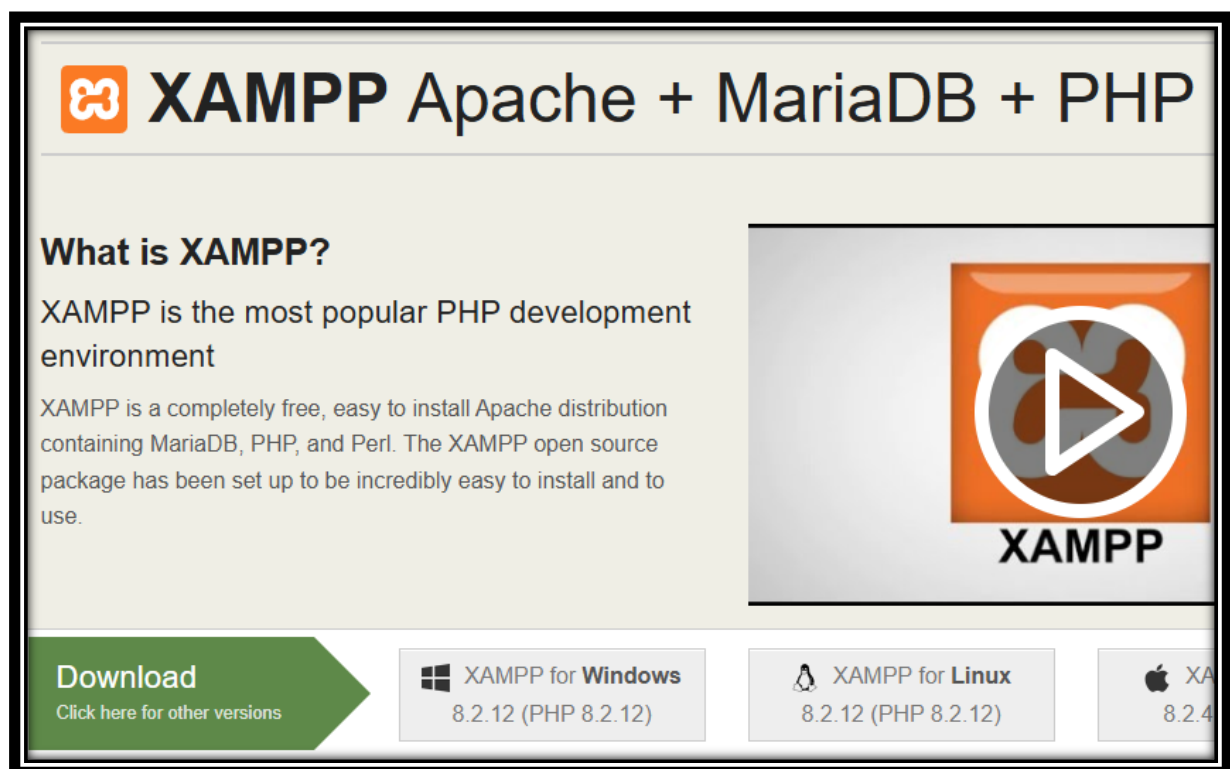

Session: 2024-2028

Objective

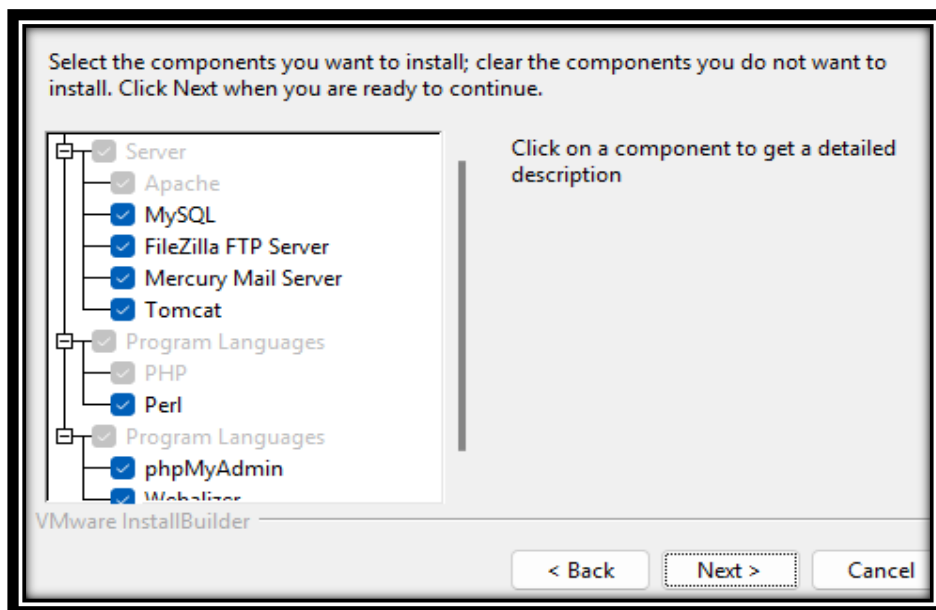

To download, install, and configure XAMPP to run a local Apache web server and MySQL database environment.

Downloading XAMPP

From the Apache Friends website and downloaded the latest version of XAMPP for Windows.

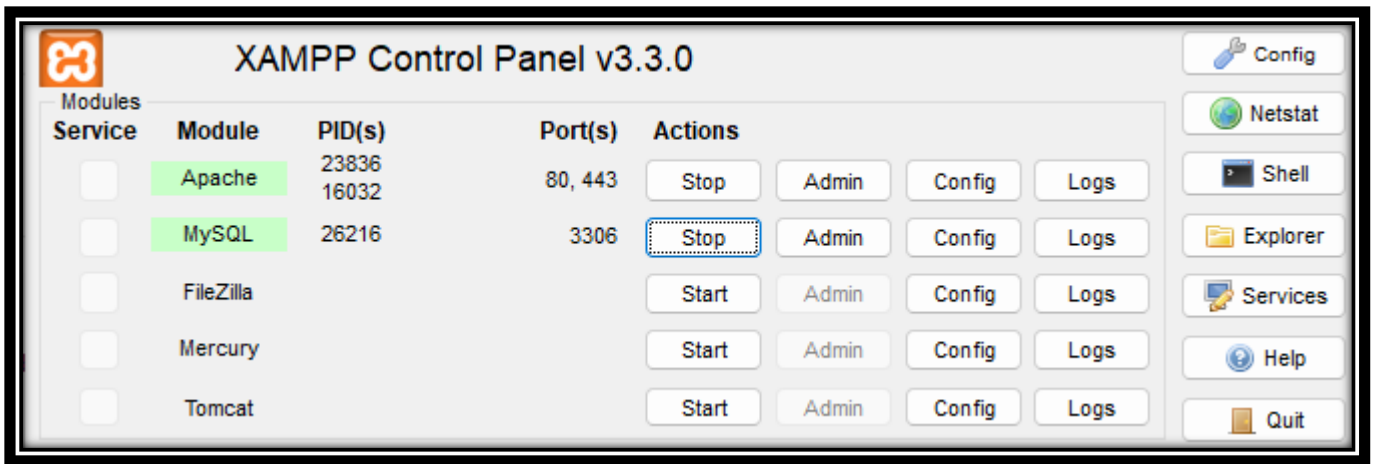

Installation

Core components, specifically Apache and MySQL, were checked.

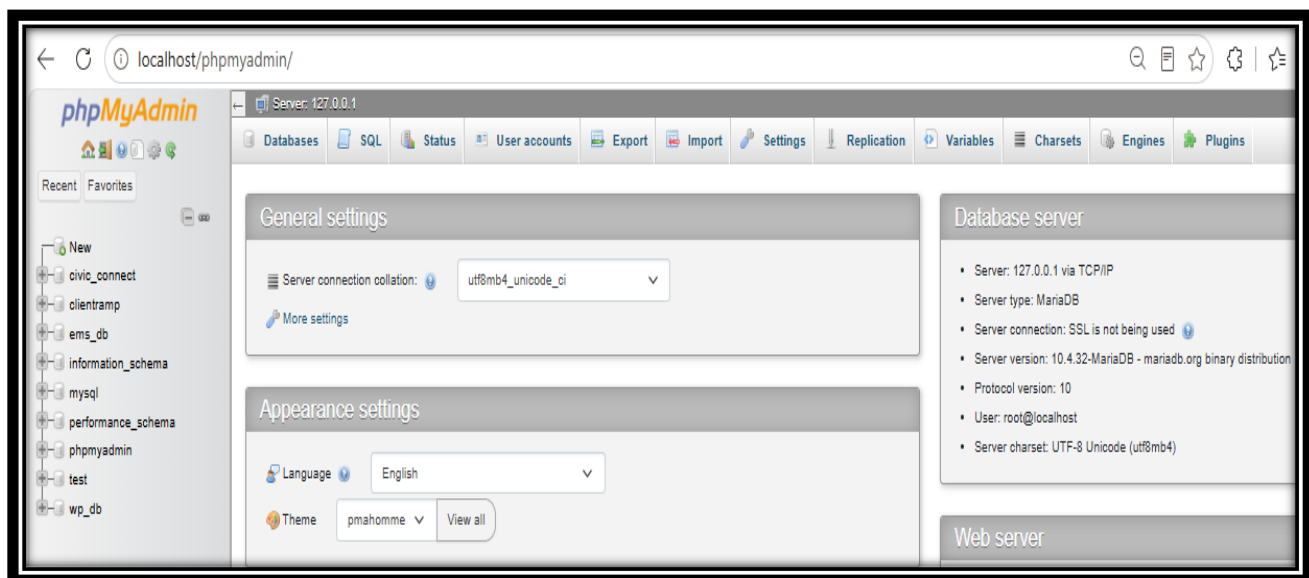

Launching

After installation, I opened the XAMPP Control Panel. I clicked the "Start" buttons for both Apache and MySQL. The module backgrounds turned green, indicating the services are running successfully on their default ports (Apache on 80/443, MySQL on 3306).

Verification

I opened my web browser and navigated to <http://localhost/phpmyadmin>. The graphical interface for phpmyadmin loaded successfully.

Thank you!
